Subject: RE: FOR APPROVAL: Intro note for 2016 US Economic Impact Report
Importance: High

Hi John-

Purple Strategies has asked us to trim a few lines from your EIR intro note, to make it fit on the page. We thought the two sentences highlighted below were easily the most expendable (everything else seemed essential), but I just wanted to confirm that with you.

Thanks,
Duncan

I am pleased to share with you our fourth annual U.S. Economic Impact Report, which highlights the many ways in which BP makes America stronger. Despite going through one of the most severe and protracted oil price downturns in recent history, we remain an important source of energy, jobs and investment for communities from Alaska to South Carolina.

~~Our U.S. footprint reflects the wide range of BP's operations. It includes oil and gas production facilities, refineries and petrochemical sites, pipelines and tanker ships, retail stations and lubricants plants, wind farms and technology centers, and downtown offices and trading floors.~~

We employ more than 14,000 people across the country, while supporting another 130,000 U.S. jobs throughout the supply chain. In 2015 alone, our operations contributed \$80 billion to the American economy. We also have donated \$147 million to U.S. community programs since 2011.

To put BP's impact in perspective:

- We are the largest investor in the deepwater Gulf of Mexico over the past decade, and we recently launched a project in our Thunder Horse field that will allow us to recover an additional 65 million barrels of oil equivalent.
- Our Greater Prudhoe Bay operations account for roughly 55 percent of Alaska's oil and gas production, and we continue trying to advance the Alaska liquefied natural gas project.
- We also are one of the biggest natural gas producers in the lower 48 states, and in 2015 we expanded our presence in New Mexico's San Juan Basin by nearly 15,000 acres.
- BP's net processing capacity at our three U.S. refineries is 744,000 barrels of crude oil a day — enough to meet the combined needs of Oklahoma, Colorado, New Mexico and Wyoming.
- Our Whiting refinery is almost three times larger than the Indianapolis Motor Speedway, making it the biggest refinery in the Midwest region.
- Our Cherry Point refinery supplies a majority of the jet fuel used at international airports in Seattle, Portland and Vancouver, British Columbia.
- Our Toledo refinery — which recently completed its largest maintenance turnaround in 40 years — produces enough gasoline each day for the average car to make more than 30,000 trips from Toledo to Miami and back.
- Our Cooper River chemicals site is America's No. 1 producer of purified terephthalic acid, and our Texas City chemicals site can produce enough paraxylene each year for customers to make 172 billion half-liter water bottles.
- We are North America's top marketer of natural gas, selling enough to meet the combined needs of France, Germany, Spain and the United Kingdom.
- We delivered enough fuel in 2015 to run all the cars in Indiana, Ohio and Washington state for the entire year.
- We operate an oil and gas pipeline network that covers nearly 4,000 miles across America.
- Our shipping business transported more than 46 million tons of cargo to or from U.S. ports in 2015.
- Our U.S. wind farms can generate enough electricity to power all the homes in a city the size of Philadelphia.
- We have donated approximately \$65 million to U.S. science, technology, engineering and math programs since 2012, while raising more than \$19 million for local United Way organizations since 2011.

We do all this while making safety the foundation of our work — on every job, at every site, every day. We combine innovative training programs and advanced technologies with

a strong culture of personal responsibility, giving our people the preparation, equipment and support they need.

BP also continues taking steps to address global climate change, both through our wind energy portfolio and through other initiatives. For example, our Cooper River chemicals site is making a \$200 million infrastructure improvement that should reduce its electricity consumption by around 40 percent. In greenhouse gas terms, this would be the equivalent of eliminating the electricity and heating emissions of about 2,000 typical U.S. homes. Meanwhile, at our Whiting refinery, we are working to reduce emissions through a \$180 million flare gas recovery project.

As you will see in this report, BP's core values — safety, respect, excellence, courage and teamwork — drive every aspect of our U.S. operations and investments. I am proud of all that we do to bolster America's economic and energy security. But I am even prouder that we always strive to do things the right way.

John Mingé

Thanks, John. The businesses have indeed confirmed and approved all the content.

Redacted - Privilege

I've added Dawn to confirm whether we have any wiggle room on that.

Duncan,

One minor comment - on the second bullet on Alaska, it reads ... “..., and we continue trying to advance the Alaska liquefied natural gas project.” I reacted to “trying” as sounding weak. What about ... “we continue efforts to advance” or “we continue working with state and partners to advance”.

We can test here in Alaska quickly if you think this has merit.

Otherwise all ok (provided we have fact checked all the bullets ...)

Thanks,

John

Subject: FOR APPROVAL: Intro note for 2016 US Economic Impact Report

Importance: High

Hi John,

We've drafted this as your Page 1 introduction note for BP's 2016 US Economic Impact Report. We wanted the note to read like an executive summary of the entire report, highlighting some of the most notable facts about BP in America while covering all our main themes (investment, safety, technology, climate, etc.). Please let us know if you have any edits or questions.

Thanks!

Duncan

I am pleased to share with you our fourth annual U.S. Economic Impact Report, which highlights the many ways in which BP makes America stronger. Despite going through one of the most severe and protracted oil price downturns in recent history, we remain an important source of energy, jobs and investment for communities from Alaska to South Carolina.

Our U.S. footprint reflects the wide range of BP's operations. It includes oil and gas production facilities, refineries and petrochemical sites, pipelines and tanker ships, retail stations and lubricants plants, wind farms and technology centers, and downtown offices and trading floors.

We employ more than 14,000 people across the country, while supporting another 130,000 U.S. jobs throughout the supply chain. In 2015 alone, our operations contributed \$80 billion to the American economy. We also have donated \$147 million to U.S. community programs since 2011.

To put BP's impact in perspective:

- We are the largest investor in the deepwater Gulf of Mexico over the past decade, and we recently launched a project in our Thunder Horse field that will allow us to recover an additional 65 million barrels of oil equivalent.
