Summary Recommendation - OxyContin:

Product	Price Increase	Timing
OxyContin	7% applies to all OxyContin strengths	February 1, 2014 and February 1, 2015

- **Introduction**

- **Review Status:**

- This proposal is being sent to John Stewart and [REDACTED] for feedback

- **Market Access**

- **Product:** OxyContin
 - **Market:** All Markets/Channels; i.e., Cash, Commercial, Medicare Part D, Medicaid, Managed Medicaid, Government, and Group Purchasing Organizations
 - **Specific Action and Change:** Greater proposed price increases at 7% [February 1, 2014 and February 1, 2015] compared to price increase levels in the recent years - which ranged from 5.0%-5.5% and also in comparison to the increase (3.0%) that was used in the most recent Ten-Year Plan [Timing of price increases - no change from 2013]
 - **Rationale For Change:**
 - Recommending a more strategic Price Increase approach for OxyContin over the next two years due to payer pressures for increased rebates, increased costs associated with healthcare reform, and the fact that OxyContin is in a crowded therapeutic product class with minor clinical differentiation across products. The main reason for the recommended pricing is the increasing demand by the payers for increased rebates and their willingness to implement strict drug utilization management programs – both of which negatively impact Purdue's revenue. Some payers have price predictability provisions, and we have carefully calculated any penalties associated with the proposed increases that arises out of these price

protection clauses and as a result of Medicaid regulations. The gain in gross and net sales outweighs the penalties associated with our price increases

- Increasing OxyContin's price by 7% will also allow for more room to rebate strategically, if necessary, while maintaining a price point that is both competitive and sensitive to OxyContin being the leading/benchmark product in the therapeutic class. We believe the price increase will have little to no effect on current and future managed care coverage because several major payers have price protection clauses built into their contract terms which guarantees the payers a maximum net price per year.
- This price recommendation is in line with branded analgesic products' historical average price increases (avg. price increase 6.9%), and calls for a 12 month time period between price increases - which is longer than the market average (avg. is 9 months). Reference the "Branded Competition" chart below for details

- The Rx size (number of tablets per script) for OxyContin has been declining and this appears to be occurring for long-acting morphine formulations and other opioids as well. There is no known precise cause for the decline, but evidence points towards Treatment Guidelines / Opioid Management Programs as having an impact – and also the more recent retail pharmacy and wholesaler activities that are causing “opioid shortages” in certain areas of the country. A price increase would aid in insulating Purdue's revenue from the Rx decline and other headwinds. Snapshot of Commercial and Part D changes in Rx Size from June 2012 to June 2013 (left margin-source IMS VOPA from Forecast Analytics Team); in addition, a snapshot of ER Morphines' Rx Size decline from Jan '11 to June '13

- The average WAC price per prescription per month of OxyContin has been declining over the last few years; as such the increase in price for 2014 will likely not get much attention from the payers.

- It is also important to note that OxyContin is the anchor/reference point for the price of new analgesic products in our pipeline (i.e., Targiniq). The greater the price increases we apply to OxyContin prior to targinique's launch will be reflected in that product's price – a product that is sure to face demands for greater rebate levels than currently in place for OxyContin. If the strength-by-strength sales of Targiniq follow the same distribution as for the corresponding strengths of OxyContin - parity pricing at launch for a 60 pill prescription would equate to a \$265 Average WAC/TRx - which is under the equianalgesic comparative pricing to the branded competition (range of ~\$310 to \$726), as shown in the “Brands: Weighted Average Cost Per Month” chart below

Launch Parity
If the strength-by-strength sales of Targiniq follow the same distribution as for the corresponding strengths of OxyContin - parity pricing at launch for a 60 pill prescription would equate to a \$265 Average WAC/TRx - which is under the equianalgesic comparative pricing to the branded competition (range of ~\$310 to \$726)

- As mentioned, the financial impact (see “Financial Impact” section below) of the price increases outweigh both price protection penalties and Medicaid Best Price impact. Plans that are price protected are listed below. Important to note that Caremark P.C.S and Prime lead the contracted accounts for OxyContin with the highest rebate plus administration fee combination, and these are the plans that will impact the best price calculations when price increases occur in 2014 and 2015. Current OxyContin price protected accounts represent 45% of the OxyContin Commercial business and 70% of the OxyContin Part D business
