State Air Agency Group Issues Model Clean Power Plan Rule (National Law Review)

(7/1) Friedland and Landfried write that the National Association for Clean Air Agencies ("NACAA") has released a model Clean Power Plan ("CPP") rule as a resource for state air agencies. The model rule highlights possible strategies for incorporating energy efficiency into state plans, and therefore provides valuable insight into the types of measures that companies can expect to face if the CPP moves forward. Under the CPP, each state must develop a plan for achieving its particular carbon dioxide emissions reduction target established under the rule. The NACAA model rule is intended to serve as a resource for the state air agencies that must develop those state plans.
