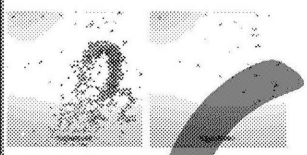
Industrial CO_2 Capture

Link Description:
Capturing carbon to reduce CO_2
Links to EF story: TBD (pending new)

HCOR

GIFs: Facebook/Instagram



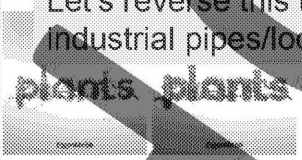
CO2 balls in shape of molecular formula begin to fall/disappear to signify reduction

Post Copy:
Lowering CO_2 emissions by capturing them at one of their biggest sources: industrial plants. That's what we're researching.

Link Headline:
Industrial Strength CCS

Link Description:
Carbon Capture to reduce CO_2

Links to EF story: TBD (pending new)



The word plants is first animated with industrial pipes and elements and then morphs in to green plants enveloping the type

Post Copy:
Plants capture CO_2 naturally. We're researching ways industrial plants can do it with technology

Let's reverse this to make it green plants at beginning and industrial pipes/look at the end to match the script

Link Description:
Could all plants capture CO_2?

Links to EF story: TBD (pending new)

Podcast/Terrestrial/Streaming Radio

CCS Plants 30A (Gen-Pop)

Update with new script

Plants capture CO_2.

What if we could help industrial plants capture it too?

Think how low emissions could go.

More and more scientists think Carbon Capture is key to reducing CO_2 emissions globally.

It's one way ExxonMobil is helping industrial plants...be more like plants.

ExxonMobil

CCS Plants 30B (Opinion Leaders)

World needs energy – but it also needs to lower emissions. ExxonMobil believes that Carbon Capture technologies are one way to help lower global CO_2 emissions—and more and more scientists agree.

As a leader in capturing carbon in its own operations, ExxonMobil is working to make this technology more efficient and affordable for other industries as well.

That's the Unexpected Energy of ExxonMobil.

Podcast | NPR (OLs)

NPR 30 Live Read

Support for NPR and the following message comes from ExxonMobil. The company that believes that Carbon Capture technologies are critical for lowering global CO_2 emissions. And more and more scientists agree. As a leader in capturing emissions in its own operations, ExxonMobil is working on ways to make this technology more efficient and affordable for other industries as well. That's the Unexpected Energy of ExxonMobil. Find out more at energy factor dot com.

NPR 15 Live Read

Support for NPR and the following message comes from ExxonMobil. The company working to make Carbon Capture technology more efficient and affordable so it can be deployed at industrial sites worldwide. Find out more at energy factor dot com.
