

THE AMERICAN INSTITUTE OF ARCHITECTS

STATEMENT OF CHARLES D. DALLUGE, ASSOC. AIA EXECUTIVE VICE PRESIDENT, LEO A DALY

"Assessing Government's Use of Design-Build Contracts"

United States House of Representatives Committee on Oversight and Government Reform Subcommittee on Federal Workforce, U.S. Postal Service and Census

> December 3, 2013 2154 Rayburn House Office Building

The American Institute of Architects 1735 New York, Ave, NW Washington, DC 20006 (202) 626-7398 govaffs@aia.org www.aia.org

Introduction

Chairman Farenthold, Ranking Member Lynch, and members of the Subcommittee, I am Charles D. Dalluge, Assoc. AIA, Executive Vice President of Leo A Daly. I want to thank you for the opportunity to testify today on behalf of the American Institute of Architects (AIA) and its more than 82,000 members.

The AIA has served as the voice of America's architects and emerging professionals since 1857. With nearly 300 chapters across the country and around the world, AIA architects work to create more valuable, healthy, secure, and sustainable buildings and cityscapes. Members adhere to a code of ethics and professional conduct to ensure the highest standards in professional practice. Embracing their responsibility to serve society, AIA members engage civic and government leaders and the public in identifying solutions to pressing issues facing our communities, institutions, nation and world.

Established in 1915, Leo A Daly is an internationally renowned architecture, planning, engineering, interior design and program management firm headquartered in Omaha, NE. Our work includes award-winning projects in 87 countries, all 50 states, and the District of Columbia. Our firm currently employs approximately 900 architects, planners, engineers and interior designers in 31 offices worldwide. It consistently ranks as one of the top largest architecture/engineering and interior design firms in the United States.

Leo A Daly is pleased to work with several federal agencies on a wide range of design and construction contracts. Federal facilities are the front doors to the U.S. at home and abroad. Therefore, we recognize that these buildings must function well, be safe, flexible and, where appropriate, welcome visitors. More importantly, they must represent good value for taxpayers. Federal design and construction projects have unique standards, processes and contracting vehicles and must balance many competing goals and priorities, from security to design excellence to energy and resource conservation.

The Federal Marketplace

The health of the architectural profession matters greatly to the overall state of the economy. Architects are the leading edge of a design and construction industry that accounts for one in nine dollars of U.S. gross domestic product. Architects are job catalysts – they are the first workers to be involved in the construction process when they develop designs for homes, offices, retail spaces, hospitals, educational institutions, government buildings, and more. Hiring an architect leads to employment in other construction-related fields, from engineers and manufacturers to steel and electrical contractors. In fact, there is one architectural service worker for every 34 construction industry workers in this country.¹ A study by the George Mason University Center for Regional Analysis found that every \$1 million invested in design and construction creates 28.5 new full-time jobs.²

The recent economic crisis affected every American, but it hit the design and construction industry particularly hard. Between 2008 and 2012, U.S. architecture firms saw their revenue plummet by 40 percent, and were forced to cut employment by nearly a third.

Recently there has been better economic news for the design and construction industry, but the recovery is fragile at best. According to the Department of Labor, architectural services employment was essentially flat in September (the most recent data available), but continues a slow, but steady, rebound from the most recent low point in August 2011. The AIA Architecture Billings Index (ABI), a leading economic indicator that provides an approximately nine-to-12-month glimpse into the future of nonresidential construction spending activity, shows modest improvements in architecture billings over the last half year³, suggesting slow but steady growth in construction employment into the middle of 2014. Despite the more positive outlook, however, many firms have simply not recovered from the worst economic crisis that many of us have seen in our lifetimes.

Because of a lack of financing in the private market since the start of the economic crisis in 2008, public sector work has literally been a lifeline for many design firms. Government procurement, including at the federal level, has helped to keep the doors open at numerous firms across the nation. However, budget cuts at all levels of government are reducing the number of projects on which architecture firms can compete.

This struggle has given the federal government additional leverage in negotiations and has enabled them to demand more from candidates. Although competition helps ensure that the

¹ U.S. Department of Labor

taxpayer receives good value, there is a difference between getting a fair deal for the government and a procurement process that forces architects, engineers, contractors, subcontractors and suppliers to spend more money for a smaller chance of getting the job. The taxpayer does not win when government contracting leaves businesses in difficult economic straits.

Design Build Construction

Federal agencies are able to use a number of different project delivery methods to design and construct buildings, including design-bid-build, design-build, and joint ventures, among others. These methodologies allow agencies the flexibility to choose the right method for a specific project. According to a survey by the AIA Large Firm Roundtable, of which Leo A Daly is a member, almost 66 percent of all domestic competitions from 2007 through 2011 were selected using the design-build method.⁴

On average, the fee design teams receive for a federal project is approximately \$1.4 million. The rewards are high for firms that successfully compete for these projects, but the cost to enter the federal market is increasingly prohibitive for firms of all sizes.

When agencies choose design-build, they post a solicitation on FedBizOps. Interested teams, typically comprised of an architect, engineer, contractor and subcontractors, submit their qualifications to the pre-selection board. In this first step, the board will review the teams' qualifications, which include past performance, resumes of key personnel, and examples of relevant projects, to create a short list for the second step in the competition.

At this point, the short-listed teams develop a more in-depth proposal based on the programmatic requirements within the solicitation. In order to develop an accurate construction cost, teams must complete up to approximately 80 percent of the design work in advance. The design work is considerable, as each team must determine space needs; mechanical, electrical, HVAC and other systems; building supplies and materials; and the cost of construction. Without this information, there is simply no way to determine a final price. This design work takes a considerable amount of time from the large group of professionals on each team, which places enormous economic burdens on each design-build team on the short list.

⁴ AIA Large Firm Roundtable, *Competition Survey Results*, May 31, 2012.

A 2012 survey published by the AIA Large Firm Roundtable found that between 2007 and 2011, architecture firms in teams that competed for public- and private-sector design-build projects spent a median of \$260,000, by making detailed plans, models and other materials.⁵ In almost 87 percent of federal design-build competitions, there are no stipends provided to the architectural firm.⁶ The firm must hope that they win, with their team, to make up the costs they expend in competing for the job.

The costs of competing for these projects are sizable because of the large amount of effort that goes into preparing a bid. As stated above, up to approximately 80 percent of the design work must be completed in order to develop an accurate price. The amount of work required from an architect is large; but engineers, contractors and subcontractors also must put forth considerable effort to determine a price.

When teams decide whether to compete for a design-build project, they weigh the costs of competing with the odds of winning. Agencies have taken advantage of their purchasing power during the recession to expand the number of short-listed teams. In the past, agencies would typically short-list three teams for a design build project. Now, there are reports that some agencies are shortlisting as many as eight-to-10 teams. In these cases, the odds of being selected drop significantly, even as the cost to compete continues to rise. Due to the current economic climate, design firms face the dilemma of "betting it all" on a contract they may not get, or self-selecting out of the federal design-build market.

Unfortunately, federal law enables agencies to create ever-longer short lists. Under current law, agencies are required to short list between three and five teams. However, the law has an extremely broad exception, stating that contracting officers have the flexibility to increase the number of finalists if increasing the number is "in the Federal Government's interest and is consistent with the purposes and objectives of the two-phase selection process."⁷.

The consequences for design firms are obvious: higher costs to compete with lower chances of winning mean that many firms choose not to enter competitions, and in some cases simply cannot afford to compete in the federal marketplace. The government therefore is losing the ability to

⁵ Ibid

⁶ Ibid

⁷11 USC §3309(d)

identify and cultivate talented firms that can provide excellent service to agencies if given the chance. The government also loses out when contracting officers spend increasing amounts of time reviewing larger number of proposals. Simply put, this is not a wise investment of limited budgetary resources.

Although many agencies employ the two-step design-build process outlined above, some agencies use a one-step design-build process. In a one-step process, agencies eliminate the pre-selection step and open the solicitation to all respondents. This allows for the government to review as many responses as they receive without reviewing the qualifications of the bidders prior to receiving a bid.

This concept sounds attractive, but when a contracting officer receives 30, 40, or 50 responses, this selection method becomes an inefficient use of limited federal government time and resources. Moreover, one-step selection allows for teams that do not have experience, effective past performance, or accurate bids to participate in the process. Contracting with teams that do not have the qualifications for the specialized work that is required on government projects frequently creates problems in the execution of the project. This leads to higher costs and longer delivery time which is not in the best interest of the government. In addition, inexperienced or under-qualified teams could become legally obligated to fulfill contractual promises they simply cannot meet—or a mistake in a bid will cause them devastating liability. For a firm that has invested money to develop the design for pricing by the contractor to be told after the fact that they are not qualified is not fair.

The Design-Build Efficiency and Jobs Act of 2013 (H.R. 2750)

The issues that architecture firms face in the federal design-build market are a serious challenge to the ability of federal agencies to deliver results for taxpayers, and they deserve Congress' attention. Fortunately, there is a way Congress can address the problem.

H.R. 2750, the Design-Build Efficiency and Jobs Act of 2013, was introduced by Rep. Sam Graves (R-MO) in July. H.R. 2750 requires contracting officers to provide a written justification to the head of an agency for requiring more than five finalists in the second stage of a design-build solicitation and agency approval of such justification. It also requires the use of two-stage selection process for contracts having a value of \$750,000 or greater. This threshold, I will note, is based on U.S. Army Corps of Engineers guidance that was issued in August 2012. Lastly, H.R.

2750 requires agencies to submit to the Government Accountability Office (GAO) and publish in the Federal Register an annual report on all contracts for which more than five finalists were selected for phase-two requests, and all contracts having a value of \$750,000 or greater for which the two-phase selection process was not used.

H.R. 2750 will provide more certainty and opportunities for design firms of all sizes who wish to enter the federal marketplace. It will ensure that agencies have the ability to select the most qualified design-build teams who will deliver the best buildings for agencies and the public. It also will limit federal agencies' burdens in reviewing a large number of proposals.

Although it does not solve every issue related to the federal design and construction process, the Design-Build Efficiency and Jobs Act is a commonsense bill that provides tangible improvements for both private sector firms and the federal government. That is why the AIA and a large number of organizations – including the Associated General Contractors (AGC), the American Council of Engineering Companies (ACEC), the Design-Build Institute of America (DBIA), and the National Society of Professional Engineers (NSPE) – have endorsed the bill and urge the Committee to advance it to the full House.

I also am pleased to note that Chairman Farenthold is a cosponsor of this bill along with a number of members of Congress from both parties, and the AIA commends him for his steadfast support.

In conclusion, I would like to thank Chairman Farenthold, Ranking Member Lynch, and members of the Subcommittee for giving me the opportunity to testify today. The AIA commends you for your commitment to addressing the challenges that businesses face in the federal marketplace, and look forward to working with you to advance H.R. 2750 and other bills that help the private sector drive the recovery. The challenges that the design and construction face are serious, but so is our commitment to play a leading role in rebuilding our country.

Committee on Oversight and Government Reform Witness Disclosure Requirement – "Truth in Testimony" Required by House Rule XI, Clause 2(g)(5)

Name: Charles D. Dalluge, Assoc. AIA - Executive Vice President, LEO A DALY

1. Please list any federal grants or contracts (including subgrants or subcontracts) you have received since October 1, 2011. Include the source and amount of each grant or contract.

(Please see attached.)

2. Please list any entity you are testifying on behalf of and briefly describe your relationship with these entities.

American Institute of Architects (AIA)

- Member of AIA
- Chair, AIA Federal Architecture Task Group
- Member of AIA CEO Large Firm Round Table
- One of two AIA representatives to the Council on Federal Procurement of Architecture and Engineering Services

3. Please list any federal grants or contracts (including subgrants or subcontracts) received since October 1, 2010, by the entity(ies) you listed above. Include the source and amount of each grant or contract.

(Please see attached.)

I certify that the above information is true and correct. Signature:

CHARLES D. DALLUGE EXECUTIVE VICE PRESIDENT LEO A DALY

Mr. Dalluge is the Executive Vice President of LEO A DALY. In this corporate leadership position, Mr. Dalluge works closely with Mr. Leo A Daly III to direct both the LEO A DALY and LOCKWOOD, ANDREWS & NEWNAM, INC. (LAN)

divisions of the Company worldwide and is responsible for the strategies and policies that guide the firm's long-term growth. He is responsible for all aspects of the Company, including all domestic and international operations, people, and projects.

LEO A DALY is one of the top architectural, engineering, planning, interior design, and program management firms with over 800 employees in 31 offices across the world and projects in 87 countries and all 50 of the United States. The firm is ranked 6th in the U.S. and in the top 10 in the world in many of its market types. Over 500 design awards reflect the firm's commitment to design excellence, as does its focus on clients.

Prior to assuming his current role and since joining LEO A DALY in 1989, Mr. Dalluge has held a variety of roles, including Designer, Senior Project Manager, Corporate Director of Development, Assistant to the Chairman, Managing Principal, and President of LEO A DALY International. He has worked in multiple offices for the firm, including Hong Kong, Singapore, Honolulu, Phoenix, Omaha, and Washington, D.C. He has been responsible for projects in over 20 countries, and under his watch the firm opened offices in Instanbul, Moscow, Beijing, Abu Dhabi, Benghazi, Tripoli, and Riyadh.

Mr. Dalluge has become a trusted source of information for the media and has been quoted, featured, or named in The Wall Street Journal, Forbes, The Washington Post, Trend Watch, The Washington Business Journal, ArchNews.com, Architectural Record, Business Week, Chief Information Officer (CIO) Magazine, USA Today, the Omaha World-Herald, Midlands Business Journal, and the National Geographic Channel. Mr. Dalluge's success is a direct result of his handson approach to both the firm's management and the development and design of key projects at home and abroad. With a strong belief in leadership, performance, and growth, he is particularly proud of:

- The LEO A DALY Leadership Institute, to develop the next generation of leaders within the firm
- A sophisticated **Succession Planning** approach, to ensure continuity within the firm and on behalf of clients
- The Futures Council, to leverage and develop talent from across the Company and focus this cross-section of employees on the most pressing issues
- The LEO A DALY Sustainability Attributes, to continue the firm's longstanding commitment to sustainable design by developing singular in-house standards to be accomplished on every project, along with a LEED focus on accreditations and registrations
- Adoption of **Building Information Modeling** on virtually every new project

Mr. Dalluge holds a Bachelor of Science in Architectural Studies degree from the University of Nebraska-Lincoln. He has promoted the LEO A DALY concept of "green design" initiated over 30 years ago and holds LEED[®] (Leadership in Energy and Environmental Design) Professional Accreditation by the U.S. Green Building Council.

He serves on the Executive Board of the Design Futures Council; is a trustee of the Omaha Business Ethics Alliance; serves on the Professional Advisory Committee for the College of Architecture at the University of Nebraska and Co-Chairs the College of Architecture Fundraising Campaign at UNL; is a member of the American Institute of Architects (AIA) CEO Large Firm Round Table, has been appointed Chair of the organization's Federal Architectural Task Force, and serves on the Council on Federal Procurement of Architecture/Engineering Services Board. He is a member of the Design-Build Institute, the Society of American Military Engineers, the U.S. Green Building Council, The Metropolitan Club, and is a contributor to AIA's monthly "Work-on-the-Boards" survey.
